

Highlights (25 Sept - 06 Oct, 2023)

Malaysia: Budget 2024 to boost revenues, unveil targeted subsidies; BAB MK, CYP MK raised to BUY; GAM MK on a roll

We expect a Budget 2024 (13 Oct) to forecast the 2024 budget deficit/GDP ratio at 4.0%-4.3% (2023E: 5.0%; 2020-22 avg.: 6.1%), in line with the fiscal consolidation targets of 12MP MTR (2025E: 3.1%) and MADANI Economy (c.3% within 10 years). Reintroduction of GST does not appear imminent - instead, tax measures will lean towards taxing "income, profits and wealth" e.g. capital gains tax (CGT) on unlisted shares, luxury goods tax and adoption of the 15% Minimum Global Corporate Income Tax Rate on MNCs. Other potential tax issues include review of plantation sector's windfall profit levy and (more unlikely) carbon tax. We also expect confirmation of a transition to targeted (vs. current blanket) fuel subsidies, to be linked with the launch of a Central Database Hub (PADU) on Malaysians' socio-economic information that will be used to target other subsidies/cash handouts. Re stocks, we upgrade Bumi Armada to BUY (from SELL) as the negative fallout from the unplanned shutdown of the Kraken FPSO in May is now behind it; sharp decline in net gearing (to 0.7x) coupled with Nov start of bareboat charter recognition for 30%-JV Sterling V FPSO and a further decline in finance costs mean we are forecasting a record-high core net profit of MYR847m in FY24E. Renewables play Cypark is also upgraded to BUY (from HOLD), with its three ongoing LSS projects on track for end-2023 completion, with its WTE plant to achieve optimal operations around the same time. Top construction sector pick Gamuda reported record FY23 earnings, boosted by overseas E&C jobs - with outstanding order book at an all-time high of MYR20.6b, earnings are expected to hit MYR1bn in FY25E.

Singapore: MAS may ease slightly; Upgrade UMSH SP to BUY

There is a 20% chance of MAS taking a slight "easing" path in its mid-Oct meeting given stagnating growth and falling inflation. With ample fiscal space, the government has the capacity to do the heavy lifting if the economy contracts. From a regulatory perspective, expect further tightening of AML policies following the creation of an inter-ministerial panel to review Singapore's money laundering regime. For the overall market, we have higher weightings on growth, while keeping a sizable mix of defensives. Stocks that offer near-term earnings visibility and strong competitive positioning for superior pricing (defensives) - DBS, Genting Singapore, Frencken, CICT - and stocks offering growth acceleration due to medium-term themes such as EM consumption, policy support, ESG (growth) - CSE, ST Eng, Raffles Med, SCI, CDL Hosp. Trust, ComfortDelGro. Raise UMSH to BUY with higher SGD1.44 TP, following strong upgrades to key customer profit guidance. Maintain RFMD BUY following accretive hospital purchase in Vietnam. Maintain LHN BUY following robust 3Q23 results. Maintain DMHL BUY given strong order book growth and maintain ST BUY post-unlocking value via data centre sale.

Indonesia: Rupiah weakens; Maintain SELL for UNVR IJ

In unison with other emerging market peer currencies, the Rupiah weakened vs. the USD, plunging through the key 15,500 level as US 10Y yield broke above 4.5%. Favourable September domestic headline inflation, which at 2.3% fell to its lowest since Feb 2022 (Aug: +3.3%) did not alleviate pressure on the Rupiah. Of note, our economics team maintains FY23/24 headline inflation forecast at a relatively benign +3.7%/+3.0%. We believe US leading indicators will continue to show weaknesses due to US retail gasoline prices breaching USD6 per gallon, uncertainty with the budget renegotiation, and resumption of US student loan repayments. We advise risk off until we see DXY to peak out and USDYEN to capitulate by falling below 144 after rising to 150, a level not seen in more than 20 years. Consequently, we recommend clients to avoid commodity names and to remain defensive but be prepared to buy on weakness big banks with strong earning visibility (BMRI and BBCA). We also reiterate our positive call on the cement sector with SMGR as our top pick as cement demand will likely bottom out in 2H of this year. We maintain SELL on and lower our TP for UNVR to IDR3,050 as its parent company ULVR's decision to sell Elida Beauty, which houses 22 beauty and personal care brands, may affect UNVR's FY24 sales/core profit significantly, by -5%/-10%, respectively.

Thailand: Three thematic drivers - policy, turnaround and value - underpin positive 4Q23E outlook

SET Index had a major correction in September, having fallen by 6.0% MoM to 1471.43 points. The sell-off was unexpected given optimism relating to potential stimulus measures from the government. However, we believe the market was cautious on implementation and factored in the negative impacts first (for example, to utilities and some energy companies on energy price reductions). A surprise rate hike by the BOT to pre-empt potential inflationary pressure from the government stimulus was also a headwind for the market. On top of that, DELTA had a major correction as its parent company made a sizeable private placement at a steep discount to market price. Telecom ended up being the only sector that closed the month in positive territory while electronics was by far the worst underperformer with -21% return for the month. Despite the sharp and unexpected correction, we think the outlook for Thailand remains positive in 4Q23E. Our view is based on improving farm income, potential growth in tourism revenue during the high season, and uplift from government economic policies. For our top pick selection, we identify three plays to outperform the SET Index: policy plays, turnaround plays, and value plays. First, we think CPALL and COM7 will benefit the most from cash handouts and lower electricity costs. Specifically, CPALL is the only player with enough reach nationwide to benefit whereas COM7 is the discretionary name with the greatest coverage. CPALL is also one of the largest buyers of electricity in Thailand and will benefit from lower power price. Secondly, we see opportunities for turnaround plays in CPF (rising swine prices, lower feed costs) and TRUE (easing competition driving higher ARPU, cost synergy, lower electricity bills). Lastly, banks and energy remain the core value plays in the SET Index. Our bank top picks are BBL and KTB while BCP and PTTEP remain our energy top picks.

Philippines: BSP holds rates steady; AP PM, MPI PM and UBP PMremoved from PSEi; Initiating coverage on CEB PM

The PSEi rose by 4.3% over 19 Sep - 3 Oct, following the decision of the Bangko Sentral ng Pilipinas (BSP) to keep policy rates steady, at 6.25%. Nevertheless, the BSP signaled a potential off-cycle rate hike before its Nov meeting, as Sep inflation is expected to settle within 5.3-6.1% due to price uptrends for fuel, electricity and key agricultural commodities, and the PHP depreciation. It raised its FY23/24E inflation forecast to 5.8%/3.5% (from 5.6%/3.3%). On corporate news, AP, MPI and UBP were removed from the PSEi and will be replaced by BLOOM, CNPF and NIKL. We have also initiated coverage of low cost carrier Cebu Air (CEB PM) with a BUY rating and a DCF-based TP of PHP55.00 (WACC: 7.6%, G: 3%). Given the oil-driven pressures on domestic inflation, we reiterate our preference for defensive consumption- and mobility-driven stocks SM, BDO, GTCAP, BLOOM and JFC, with portfolio returns to be boosted by the high and sustainable dividend yields of GLO.

Vietnam: VN-Index corrects 8% to a now-attractive level; 2023 GDP forecast raised to +4.8% (from +4.0%)

The VN-Index had a large drop of 8% over the past two weeks, initially driven by FX concern (VND losing 2.2% YTD) and fear of further investigation/ disruption following the disciplining of some members of the Communist party's central committee at its eighth plenum. Profit-taking and margin deleveraging on the stock market triggered by the sharp drop exacerbated the situation. In response to FX pressure, the SBV has issued T-bills totaling VND120t to raise interbank rates, which aims to narrowing interest rate differential while ensuring least impact on interest rates in the money market to maintain accommodative policies. SBV has yet to sell USD, while rebuilding FX reserves is a plus to SBV's positioning to manage the VND depreciation at a 2%-3% target this year. 3Q23 GDP growth came out at 5.3%, below government's expectation, implying more stimulation is needed to reach the full year target of 6.5%. Nonetheless, we raise 2023 GDP growth forecast to 4.8% (vs. previous 4.0%) on expectation that growth will accelerate in 4Q23 thanks to export recovery, public infrastructure spending, FDI upswing and tourism rebound. Recent inflation pick up should not be a concern as underlying pressures are contained and CPI should come in well below SBV's full year target of 4.5%, per our estimate of 3.4%. Despite a much better situation compared to a year ago when macro setup was at extreme conditions (peak FX pressure + black-swan Van Thinh Phat), the VN-Index is only c.10% above the level a year ago. We believe market has over-reacted and overlooked the low deposit rate environment which is near record low levels, hence offering attractive entry points for long-term investors. That said, volatility is expected to sustain following the steep decline of the VN-Index. For Oct, our picks are STB (solid turnaround story), SSI and HCM (removal of pre-funding for foreign investors), FPT (best positioned for IT and semiconductor industry) and PC1 (key beneficiary for public spending).

October 6, 2023 4

MALAYSIA: strategy and macro highlights

Fig 1: Malaysia: market strategy and sector/stock positioning

Macro Highlights / Market Strategy:

- Re the 15th General Elections (GE15), the unexpectedly strong showing by Islamist party PAS now controlling >20% of Parliament and whose policy platform is focused on incorporating Islam into all aspects of society, including politics, law and administration equates to a significant structural step-up in the uncertainty / market risk premium surrounding Malaysia's future political and policy direction despite PAS not being a member of the current government coalition. "Sin" sectors like gaming and breweries are most obviously in the firing line related policy changes could have an impact on overall investment climate and market sentiment.
- Retabled Budget 2023 reiterated the government's commitment towards fiscal consolidation, with the budget deficit targeted to decline to 5.0% in 2023 (2022: 5.6%; 2020-2021 average: 6.3%) with 3.2% target by 2025. Income tax measures announced are essentially "progressive and redistributive" (i.e. individual income tax cut of 2 percentage point (ppts) for low-to-middle income taxpayers vs 0.5-2 ppts hikes for higher income taxpayers; capital gains tax for unlisted shares; global minimum effective tax), coupled with measures to broaden indirect tax base and revenue (e.g. luxury goods tax) as well as enhance tax compliance (i.e. third round of Special Voluntary Disclosure Programme (SVDP)). Strengthening the governance of public finance and Government spending is anchored by pending tabling of Fiscal Responsibility Act and Government Procurement Act. Given these measures to strengthen the country's fiscal dynamic, Goods and Services Tax (GST) is not high or urgent on the agenda. Fuel subsidy looks like staying for now amid savings from lower crude oil price outlook (2023: USD80/bbl; 2022: USD100/bbl; MIBG 2023E: USD100/bbl).
- OPR cuts in 2020 totalled 125bps, taking it to a record low of 1.75%. BNM first raised the OPR by +25bps on May 11th, well ahead of our/consensus' 4Q22 expectation, and hiked again in July, Sept and Nov, by +25bps each. The hiking "pause" in Jan 2023 (and March) was a surprise but BNM has subsequently hiked again in May, by +25bps, taking the OPR back to the pre-pandemic level of 3.0%. The pauses in July and Sept appear to indicate greater comfort with both inflation trends as well as Ringgit support domestic headline and core inflation are expected to moderate this year, to 3.0% (2022: +3.3%) however, inflation risk is to the upside give uptrend in energy and food prices even as the government is signalling Budget 2024 to be announced Oct 13 will see changes to the current blanket subsidies for petrol and diesel i.e. to become more targeted which will invariably have an inflationary impact.
- Re key market-impacting developments, we note i) government policy roll-out has picked up significantly, kicking-off with the MADANI Economy Framework and the National Energy Transition Roadmap (NETR, Part 1) in late-July, with NETR Part 2 and the New Industrial Masterplan (2030) subsequently launched end-Aug; to be followed by Budget 2024 in October 2024 energy/utilities, renewables, construction and property sectors are in focus; and ii) stamp duty for shares trading has been lowered to 0.1% from 0.15% effective Jul 2023, but stamp duty cap of MYR1,000 per contract note is maintained. Incremental boost to retail trading.

Sector/stock positioning:

- Given continuing uncertainties around GDP deceleration, policy/political risks, geopolitics and global interest rate adjustments, we are balanced in our positioning via a mix of value and growth picks + continuing yield focus. We like i) Mid-cap Financials (HLBK, HLFG. Public, ABMB, Allianz, RCE Capital); ii) Auto (BAuto, Sime, MBM, UMW Holdings); iii) Construction (Gamuda, IJM); iv) Externally-driven earnings / Exporters such as tech sector Greatech (EV, Solar) and ITMAX (smart city specialist); also Metals (Press Metal) and EMS (ATech); v) Oil & Gas (Yinson, Bumi Armada); vi) Aviation (AAX, CAPITALA and MAHB); and vii) Tech / Software (MYEG and CTOS). More selectively, GENP, TAH and SOP (Plantations), Telekom and Axiata (Telco), Genting (Gaming), Sime Prop., SP Setia and ECW (Property), Mr D.I.Y, Padini, Carlsberg, Heineken, DXN and AEON (Retail/Consumer), Optimax (Healthcare), Cypark and Solarvest (Renewables), Gas (M), YTLP and MFCB (Utilities), Magnum (NFOs) and YTL REIT, Sentral REIT and AXIS REIT re REITs.
- SELLs: <u>Consumer/Retail</u> (Nestle), <u>Gloves</u> (TopGlove) and SMIDs <u>Globetronics</u>, <u>Lotte Chemical</u>, <u>Tan Chong</u>, <u>Astro</u>, <u>TH Plantations</u> and <u>TSH Resources</u>.

SINGAPORE: strategy and macro highlights

Fig 1: Singapore: market strategy and sector/stock positioning

Market strategy:

- We expect MAS to remain focused on inflation and maintain the prevailing rate of S\$NEER appreciation at the mid-Oct meeting. But with growth stagnating, inflation easing from their highs and 3Q GDP set to be weak, we ascribe a 20% probability of MAS surprising with a "slight" easing and reducing the slope of the appreciation bias.
- We expect the government to do the heavy lifting to support growth, if the economy stagnates or contracts. There is ample fiscal space to deploy additional support, given strong revenue growth that could exceed MOF's projections in FY23/24.
- Aug manufacturing slumped the most since Nov 19, as industrial production fell -10.5% in seasonally adjusted MoM terms (vs. +3.7%. Electronics and chemicals reversed back in to slump. We maintain our GDP forecast at +0.8%, which stands at the lower range of MTI's +0.5% to +1.5% range for 2023E.
- Singapore is set to create an inter-ministerial panel to review its anti-money laundering regime. This follows the raids by its authorities that arrested 10 foreign nationals on money laundering charges, with the value of the asserts seized at USD2bn.
- For market sector weightings, we are POSITIVE on Gaming, Healthcare, Industrials, Internet, Services, Telecom and NEUTRAL Banks, REITs and NEGATIVE on Tech Manufacturing.
- Our preferred picks follow a longer term Growth approach with some weighting towards defensiveness: stocks that offer near-term earnings visibility and strong competitive positioning for superior pricing (defensiveness) DBS, Genting Singapore, Frencken, CICT and stocks offering growth acceleration due to medium term themes such as EM consumption, policy support, ESG (growth) CSE, ST Eng, Raffles Med, SCI, CDL Hospitality Trust, ComfortDelGro.

Sector/stock positioning:

- Upgrade UMSH to BUY and new TP SGD1.44 (c. SGD1.16) following key customer AMT raised 4Q23 profit guidance. AMT inventories
 are low, increasing chances for a rebound in component orders for UMSH
- Maintain RFMD at BUY and TP of SGD1.65 following acquiring a majority stake in American International Hospital in Vietnam. This
 should provide gearing for rapidly growing demand for private healthcare services there
- Maintain LHN at BUY and TP of SGD0.54 following strong 3Q23 results. Operating metrics remain solid and there is potential for further value-unlocking divestments, special dividends. A successful upgrade to SGX Mainboard is also a positive catalyst
- Maintain DMHL as BUY and TP of SGD0.51. The Group's order book has increased to SGD631m and is a strong proxy to growing FPSO demand. Potential M&A to diversify recurring revenues is another positive catalyst
- Maintain ST at BUY and TP SGD3.10. The Group has entered in to a strategic partnership with KKR to divest up to 20% of its regional data centre business for SGD1.2bn. Valuations are good and it unlocks SGD2bn of latest value for the Group. This increases risks for special dividends going forward.

INDONESIA: strategy and macro highlights

Fig 1: Indonesia: market strategy and sector/stock positioning

Macro Highlights / Market Strategy:

- In the last two weeks, JCI slightly weakened -0.53% ending at 6,961. JCI was supported by the poultry sector CPIN (+9.2%) and JPFA (+6.6%), retail sector MAPA (+6.5%) and LPPF (+6.3%), and also dairy producers CMRY (+1.0%) and ULTJ (+2.5%). However, JCI was also dragged down by metal miners MDKA (-17.6%), BRMS (-3.7%), NCKL (-7.0%), ANTM (-2.4%%), and INCO (-2.2%), coal giants BYAN (-1.7%), ADRO (-4.8%), ADMR (-11.2%), and PTBA (-2.1%), chemical companies TPIA (-1.9%) and BRPT (-10.4%), and paper and pulp industry TKIM (-5.3%) and INKP (-5.4%).
- IDR weakened against USD for the past two weeks ending at 15,530.
- Indonesia's sovereign bond front-end 3M to 1Y tenors' yields decrease by -1.7bps to -6.2bps, 2Y to 5Y yields increase by 4.6bps to 13.9bps, and lastly 6Y to 10Y tenors' yields remain stable at 14.8bps to 16.3bps.

Sector/stock positioning:

- <u>Banking</u>: 8M23 industry loan growth booked at 9.06% YoY (vs 8.54% in July'23), slowly picking up. Most of the big banks have beaten sector growth as they booked double digit growth aside from BBNI. As a result, we continue to favor big banks as we believe they are capable of capturing more loan market share and stabilize its net interest margin. Our top picks are BBNI and BMRI, as we believe they have room to grow its ROE and allow the stock to rerate in the future.
- Consumer: We maintain NEUTRAL with our Top Picks in the sector in the order of: 1) ICBP; 2) MYOR; and 3) MAPI. We argue earnings growth and recovery among names we cover will depend on its ability to expand business presence, address competition risks, and capacity to weather the cost pressures. In the next two weeks, we think investors will buckle up for the upcoming 3Q23E earnings results. ICBP and MYOR are main beneficiaries to capture stronger sales as a result of the inventory build-up at distributor level in anticipation for the upcoming election, due to high mass-market sales contribution (80% of sales). Meanwhile, MAPI will perform robustly as it captures stronger sales from back-to-school and clearance season sale; and overseas expansion which will bode well for its specialty store outlook (c.80% of sales). On the other hand, we remain bearish on our SELL-rated UNVR (see our latest update: Elida Beauty Sale risks loss of growth engine) and RALS as they have struggled to maintain their business competitiveness.
- <u>Cigarette:</u> Our Top Pick for the sector is still GGRM due to its visible earnings trajectory in FY23, mainly contributed by its aggressive ASP hike of 10-26% YTD across its products. Despite industry's falling sales volume in August, we believe GGRM will still be able to achieve our FY23E earnings of IDR6.6t as our sensitivity analysis proves a -1% decline in GGRM's sales volume will only drag -2% of its earnings. On the other hand, a +1% ASP increase will lead to +17% hike in GGRM's earnings. August tobacco excise tax print is still weak as it only forms 55% of government's FY23 target of IDR232.6t (vs. 3-year mean of 59%). We believe consumers are down trading to cheaper cigarette alternatives produced by Tier-II and III cigarette manufacturers. Moreover, more are purchasing illegal cigarettes to avoid c.10% increase in FY23's excise tax. Thus, we expect GGRM and HMSP's sales in 2H23E will remain soft. According to a news publication, illegal cigarette market share has reached 30% in 1H23.
- <u>Coal:</u> Coal price has seen to be relatively stable for the month following the recent rally. We recommend tactical buy on coal producers as we think this coal price rally along with strengthening USD will support ASP resilience in 3Q23E. We favor UNTR and ADRO for its proxy to thermal coal and cost effective operations.
- <u>Metal:</u> Global economic worries, especially on China's recovery has weigh on industrial metal prices including nickel. Nonetheless, we believe nickel price to be bottoming out, led by recovery in NPI (+8.4% QTD). Additionally, we expect LME nickel price to have room to improve as supply for Class-1 LME remains limited. Meanwhile, higher oil prices will pressure margin for the 2H23E. Nevertheless, our top picks are MDKA and INCO for its proxy to Class-1 LME.
- <u>Telco:</u> Smartfren (FREN) plans to do a partnership with Telkomsat, subsidiary of <u>TLKM</u> to utilize Starlink network and provide internet access to remote areas. Currently, FREN has 45,000 BTS across 288 cities/municipalities in Indonesia. We think this can benefit both Telkomsat and <u>MTEL</u>, as we believe <u>MTEL</u> is the leading tower provider in ex-Java, especially on second/third tier cities.
- <u>Property:</u> 3Q23 saw residential launches from SMRA, BSDE, and CTRA. Launches sported good take-up rates due to strong enduser demand and liquidity of mortgages and we believe FY23E pre-sale achievement will reach our forecast of IDR25t. We recommend a tactical buy for the three developers ahead of the 3Q pre-sale result.
- <u>Media:</u> We still maintain our believe that MNCN's performance will slightly increase in 2H23, driven by its diversified business. MNCN recently held its first music festival that is expected to become one of the company's revenue generators, due to the rising interest in festivals and concerts in the country. As of August 2023, MNCN still dominates the FTA TV industry, with a primetime audience share of 41.7% and ad-spend share of 46.1%. Furthermore, its advertising video on demand (AVOD) called RCTI+ reached 69m MAU (vs. 68.5m in 2Q23) due to its content offerings.
- <u>Infrastructure:</u> The Ministry of Public Works is targeting the Jakarta Outer Ring Road 2 (JORR 2) to commence its operation by the end of 2023. The JORR 2 will connect Greater Jakarta, especially Soekarno-Hatta Airport to Jagorawi. Currently, both Serpong-Cinere (section 2, 3.64km) and Cinere-Jagorawi (section 3B, 2.19km Krukut-Cinere) toll roads are on an operational worthiness test. We believe traffic will increase once it is connected to the Jagorawi toll road. Hence, we believe that the operational of JORR 2 will benefit **JSMR**'s plans.
- <u>Cement:</u> August '23 recorded cement sales of 6.0m tonnes (+2.6% MoM, +1.9% YoY), continuing its recovery momentum in the early months of 2H23. Market share for both <u>SMGR</u> and <u>INTP</u> grew YoY to 51.7% (+342 bps) and 27.6% (+300 bps) respectively. We recommend a tactical buy on <u>SMGR</u> and <u>INTP</u> ahead of 2H domestic demand recovery.

THAILAND: strategy and macro highlights

Fig 1: Thailand: market strategy and sector/stock positioning

Market strategy:

- Policy rates: BoT has hiked interest rate by another +25bps to 2.50% at its Sept meeting, the highest level in nine years. We are expecting the BoT to remain on hold for the rest of the year, but cannot rule out another hike if fiscal stimulus turns out to be excessively expansionary, which fuels added inflationary pressures.
- Inflation: Sept inflation declined to 0.3% YoY pace compared to 0.9% in Aug. YTD, inflation average 1.82% YoY. We expect headline inflation to be 2.5% in 2023, down from 6.1% in 2022.
- THB: THB has weakened sharply against the USD after the election. This is due to flight of capital whereby foreigners were big net sellers of both Thai equities and bonds. Still, given rising current account surplus, we expect THB to strengthen to 33.0.
- GDP growth: NESDC revised its forecast to 2.5-3.0%, down from the previous forecast of 2.7-3.7%. (vs our forecast +3.2%) accelerating from 2.6% growth rate in 2022. 2Q23 GDP release undershooting with growth of 1.8% (from 2.6% in 1Q23). Strong consumption growth (+7.8%) and export of services (+54.6%, mostly due to tourist income) were strong drivers. Key drags were public spending (-4.3%, no COVID handout) and exports (-5.7%).
- Current Account: Improving tourism receipts and falling oil prices will help swing the current account into a surplus of 3.5% of GDP in 2023.
- Politics: Thailand finally has a new Prime Minister, Mr. Srettha Thavisin who received the royal approval on 23 August. We expect the new government to be formed by mid-September at the latest. We see this as a positive development as Pheu Thai-led government is likely to focus on the economy and we expect up to THB965b (equivalent to 5.5% of GDP) in short-term stimulus starting as early as 4Q23.
- Macro key events to watch: Inflation (released the 6th of each month), Exports (23rd of each month), BoT data (end of each month), Policy rate decisions (2023 remaining meetings are held on 27 Sept, 29 Nov).
- Strategy: We expect SET Index to remain volatile in the near term given political uncertainties. Still, we think downside risks look limited given already sharp EPS downgrade YTD and that valuation is already almost 1SD below its 10Y average. Tactically, we favour banks and energy and turn more cautious on consumption and tourism plays.
- Strategy key catalysts and events: government formation and and global financial markets.

Sector/stock positioning:

Below are details of our sector views, and top 12-month buys within each sector. The companies in **bold green** are our top buys.

- Banks: We expect sector NIM to benefit from interest rate uptrend. This will help drive earnings improvement and ROE expansion. Our top sector pick is Bangkok Bank (BBL TB) as we expect NII and NIM to improve after the bank has cut its deposit rate in mid-June despite on-going BOT rate hikes. We also like Krung Thai Bank (KTB TB) as we expect the higher loan yield and NIM to support earnings growth in 2H23.
- Finance: Consumer finance companies are likely to benefit from the government stimulus policies eg cash hand-outs and minimum wage hike in 2024. However, we expect the sector earnings are likely to hit from (i) the lower NIM from the higher funding cost and (ii) higher NPLs and credit cost in near term. Our top BUY is Ngern Tid Lor PCL (TIDLOR TB) for its strong fee income growth, above-sector-average NPL coverage and lower cost of funds. Our top SELL is Srisawad Corporation (SAWAD TB) as the company is taking on more risk by increasing HP motorcycle loans, but we see its loan-loss reserve is too low.
- <u>Energy:</u> We are positive on Thai energy sectors particularly refinery stocks given bullish outlook and attractive valuation. Singapore GRM remains elevated which should support our top pick Bangchak (BCP TB). We have also re-initiated coverage of PTT Exploration & Production (PTTEP TB) with a BUY rating and TP THB 194. We see a strong outlook for oil price over the next six months, driven by OPEC+ production cut and resilient demand growth.
- <u>Telcos:</u> Price wars have officially ended as ARPU began to recover. In 2Q23, ARPU in the mobile and FBB industries increased by 1% and 2% QoQ, respectively. Mobile competition eased further in early Aug, and we expect to see QoQ increase in the sector's 3Q23 core profit. We have a BUY rating on Advanced Info (ADVANC TB) (THB251 TP) due to FY23E core profit growth of 13% YoY and FY23-24E yields of 4%.
 - Construction materials and services: 2H23 trends indicate improved cement demand within Thailand, slightly better than 2H22. This momentum is supported by on-going government projects, although new projects have not yet emerged. Coal cost and electricity tariff has decreased which will help lift gross margin. However, the sector roof tiles and floor tiles were affected by weak purchasing power in the provinces. TOA Paint (TOA TB) and CH. Karnchang (CK TB) are our top pick as high growth potential.
- <u>Automotive</u> Thai automobile production in 3Q23 is expected to improve QoQ but will decline YoY, due to the effect from EV cars and credit limitation. We expect the earnings of AH, SAT, and STANLY to improve QoQ but decline slightly YoY in line with automobile production. We maintain our Neutral view on the sector. Aapico Hitec (AH TB) is our top pick given strong sales growth and gross margin expansion, valuation is also cheap.
- Commerce: We saw weaker SSSG QTD on seasonal impact but the 3Q23E earnings are likely to grow YoY. Consumer staples' SSG outperformed home-improvement operators. The shooting incident at Siam Paragon on 3 Oct will be negative for tourism. However, tourist sales represent just 3-9% of retail sales while we believe the festive season, more promotions, and government policies (lower energy prices) will spur domestic consumption in 4Q23. CP All (CPALL TB) remains our Top Pick in the retail sector as Thailand's leading convenience store, wholesale and retail business operator.
- Agri, Food & Beverage: Agribusiness sector should post improving earnings in 3Q23 due to seasonal impact and declining raw material costs. We still like Charoen Pokphand Foods (CPF TB) as we believe its valuation has already bottomed out. We also believe CPF's operations have bottomed out in 2Q23 and expect a turnaround from 2H23E. Srinanaporn Marketing (SNNP TB) remains our top pick given its healthy growth prospect.
- Technology: We prefer Humanica (HUMAN TB) (BUY, THB14.0 TP) over BBIK (BBIK TB) (HOLD, THB119 TP) due to its lower FY24E P/E of 27x (vs BBIK's 31x). For HUMAN (provider of HR software and solutions), we forecast 3Q23E core profit of THB70m (+24% YoY, +9% QoQ) on the back of Workplaze project implementation. Core profit should then grow to THB90m (+15% YoY, +28% QoQ) thanks to more revenue from Workplaze and a high season for ERP project implementation.

PHILIPPINES: strategy and macro highlights

Fig 1: Philippines: market updates and sector/stock positioning

Market updates:

- The PSEi rose by 4.27% in 19 Sep 3 Oct, following the decision of the Bangko Sentral ng Pilipinas (BSP) to keep policy rates steady at 6.25% in its Monetary Board meeting last 21 Sep. Nevertheless, the BSP signaled a potential off-cycle rate hike before its Nov meeting, as Sep inflation is expected to settle within 5.3-5.6% due to the uptrend in the prices of fuel, electricity and key agricultural commodities, and the PHP depreciation. As such, we adjust our FY23 headline inflation forecast to +6.0%, from +5.5% previously, and trim our FY24 policy rate cut expectation 100bps, from 200bps previously, which mirrors our revised US Fed rate cut of 100bps (from 200bps) in FY24E.
- The regional wage board has approved to raise the minimum daily wage of workers in three Philippine regions: +PHP30 in Cagayan Valley; +PHP35.00 in SOCCSKSARGEN region; and +PHP40.00 in Central Luzon. These will take effect on 16 Oct.
- The balance of payments (BoP) position remained in a deficit for a fifth consecutive month at USD57m in Aug, though this is a stark 90% improvement from the USD572m gap recorded in Aug 2022. Domestic liquidity (M3) marked the slowest growth in six months at 5.7% Jul to PHP16.2t, amid restrictive monetary stance in recent months.
- As a result of the FTSE and PSEi rebalancing, foreign net outflow reached USD223.1m in 19 Sep 3 Oct, translating to YTD outflows of USD732.5m. AP, MPI and UBP were removed from the PSEi and are replaced by BLOOM, CNPF and NIKL. The PSEi currently trades at 10.8x 12-month forward PER, which is 2SD below the 10Y mean of 17.2x.
- Positive catalysts: Passing of new economic policies, including rationalization of fiscal regime in the mining sector, the re-launch of the public-private partnership program for infrastructure and launch of the sovereign wealth fund. Risks: food supply shortages and fluctuations in fuel prices, which can cause spikes in domestic inflation, credit ratings downgrade for the country, and implementation of additional tax measures.
- Near-term macro events that could impact our market/stock positioning include legislation on tax reforms (expansion of VAT base and possible rate reduction, imposition of VAT on digital service provides, reform of the Motor Vehicle User's Charge, repeal of excise tax exemptions of pickups and imposition of excise tax on motorcycles, the talked-about junkfood tax).

Sector/stock positioning:

- We continue to advocate for a consumption-based exposure via SM, BDO, GTCAP, BLOOM and JFC. GLO remains to be our preferred yield stock as it has lower downside risks and a decent yield of 6%.
- We like <u>JFC</u>, which offers a direct play into domestic consumption and the recovering dine-in activities. This is evident in JFC's 2Q/1H23 earnings results, which came in in-line our estimates as a result of a 22% YoY, domestically-driven revenue growth and EBITm outperformance resulting from its cost rationalization programs.
- GTCAP owns the Toyota franchise in the Philippines, offering the best play to the country's auto industry. Toyota, which is the runaway market leader with a 47% share of total units sold in 7M23, has strong pricing power such that it is able to maintain margins, partially hedging it against FX-driven cost hikes. The inherent low auto ownership in the country, plus banks' more aggressive stance on auto loans, should support continued double-digit growth for GTCAP in FY23/24E.
- **BLOOM** is the leading casino operator in the Philippines. Its Solaire is well positioned to capture industry growth, which we expect to be led by locals and permanent foreign residents, consistent with pre-pandemic industry growth. More than its leadership in a domestic demand-driven market and near-term recovery, BLOOM also has a promising expansion pipeline, which could add up to PHP101b in GGR by YE26E.
- <u>SM</u> remains to be our preferred consumer play. SM is the country's consumption catch-basin, evidenced by its strong 1H23 performance, where its retail and mall segments have shown to fully recover and exceed pre-pandemic operating levels.
- Despite our less positive view on the banking sector, we continue to like <u>BDO</u> as its more aggressive growth strategy in the consumer lending space, along with its high CA/SA base, could partially offset the drag from the prospective policy rate cuts on its NIMs. Finally, its scale enables it to get high flow-driven FX income that also contributes to its income stream.
- We expect <u>GLO</u> to be less vulnerable to the industry-wide deceleration in the fixed-line segment, particularly as GLO's other, non-telco investments have turned profitable in FY23. On top of the stable growth prospects of its non-telco segments, which should push the stock to re-rate, GLO also offers decent yields of 6%, offering downside protection.
- PNB is our top underweight given its lack of strategic direction as it has yet to elect a new President, and a higher-than-peers NPL ratio of 6.8%.

VIETNAM: strategy and macro highlights

Fig 1: Vietnam: market strategy and sector/stock positioning

Market strategy:

- We raise our 2023 full-year GDP growth forecast to 4.8% from the previous 4.0%. Inflation, which was not a root cause for a moderate cyclical downturn for Vietnam's economy from 2H22, emerged as a top concern of policy makers in early 2023. However, it was in check in most of 2023. We expect headline inflation to stay at 3.4% for 2023, lower than government's target of 4.5%.
- 3Q23 GDP grew 5.3%, accelerating from 4.1% in 2Q23 and 3.3% in 1Q23. This is still far lagging behind the government's full year target of 6.5%. To stimulate the economy, the SBV has implemented 4 rounds of policy rate cut, bringing down discount rate by 400bps to 3% and lowering 6M deposit cap rate to 4.75%. The government showed determination to pursuit easing policy. Given (i) the expectation that Fed is nearing the end of its tightening cycle, (ii) no Black Swan event like Van Thinh Phat in 2023 and (iii) manageable CPI, we expect SBV to maintain accommodative monetary policies in 4Q23 and 2024.
- FX pressure eased in 1H23 before mounting in 4Q23, however we believe the SBV is well positioned this year to limit VND depreciation to 2%-3%. We expect FX to retreat in 2024-2025 given Vietnam's consistently positive current account and the DXY appears to be peaking.
- The government's abrupt crackdown of the bond market, including Decree 65 issued last year, leaved a server liquidity crunch situation for property markets amidst weak demand. Refinancing of the c.USD8.4b/USD7.7b of bonds maturing in 2023/2024 will be an enormous challenge for the real estate market. However, recent policy developments, including Decree 08 issued in Mar-23, are showing great efforts of the Government to resolve these bottlenecks. It reduces payment pressure for developers as it allows (i) bond payment by assets and (ii) partial restructuring of bonds and the delaying of the implementation of stricter bond investor filters. We also see initiatives from the government to clear legal issues for specific real estate projects and renovate land laws.
- We roughly estimated non-bank earnings YoY growth to contract to 3% in FY23E (vs previous forecast of 19 %), while banks should still be able to generate 12% YoY earnings growth (vs previous forecast of 15% YoY growth). We expect FY23E EPS growth forecast for the broad market to slow to 7% YoY (from 20% YoY). As such, the VN-Index is trading at 10.1x FY23E P/E.

Sector/stock positioning:

- In our view, VN market had moved from event-driven downturn (i.e. the arrest of Tan Hoang Minh Chairman in April 2022) to a cyclical downturn (due to interest rates hike since Sep 2022). We believe market have bottomed out and is entering a recovery phase. Falling interest rates environment has been a key driver for the rally from May'23 and its supportive effect may sustain for the rest of the year.
- Corporate bond yield has also moderated to normalized level. We expect lending rates to cool down soon and support earnings
 recovery in 2H23 while allowing a higher valuation for the VN-Index, which we believe can re-rate to 6M forward PE of 14.5x from
 the current 12.7x.
- Fears and over-reacting of the market in response to FX pressure is sending the VN-Index to near the black-swan event level in 2022, which is offering attractive entry points for long term investors.
- We maintain our preference in <u>Financials</u> (VCB, TCB, MBB, STB, HDB, VND/HCM), <u>Consumers</u> (MWG, PNJ, VEA, KDC), <u>O&G</u> (GAS, PVS, PVD, PLX), <u>IT</u> (FPT), <u>Industrials</u> (HPG, DGC), <u>Logistics</u> (GMD and ACV) and selective <u>Property</u> names (VHM, NLG, KDH, BCM).

APPENDIX I: TERMS FOR PROVISION OF REPORT, DISCLAIMERS AND DISCLOSURES

DISCI AIMERS

This research report is prepared for general circulation and for information purposes only and under no circumstances should it be considered or intended as an offer to sell or a solicitation of an offer to buy the securities referred to herein. Investors should note that values of such securities, if any, may fluctuate and that each security's price or value may rise or fall. Opinions or recommendations contained herein are in form of technical ratings and fundamental ratings. Technical ratings may differ from fundamental ratings as technical valuations apply different methodologies and are purely based on price and volume-related information extracted from the relevant jurisdiction's stock exchange in the equity analysis. Accordingly, investors' returns may be less than the original sum invested. Past performance is not necessarily a guide to future performance. This report is not intended to provide personal investment advice and does not take into account the specific investment objectives, the financial situation and the particular needs of persons who may receive or read this report. Investors should therefore seek financial, legal and other advice regarding the appropriateness of investing in any securities or the investment strategies discussed or recommended in this report.

The information contained herein has been obtained from sources believed to be reliable but such sources have not been independently verified by Maybank Investment Bank Berhad, its subsidiary and affiliates (collectively, "Maybank IBG") and consequently no representation is made as to the accuracy or completeness of this report by Maybank IBG and it should not be relied upon as such. Accordingly, Maybank IBG and its officers, directors, associates, connected parties and/or employees (collectively, "Representatives") shall not be liable for any direct, indirect or consequential losses or damages that may arise from the use or reliance of this report. Any information, opinions or recommendations contained herein are subject to change at any time, without prior notice.

This report may contain forward looking statements which are often but not always identified by the use of words such as "anticipate", "believe", "estimate", "intend", "plan", "expect", "forecast", "predict" and "project" and statements that an event or result "may", "will", "can", "should", "could" or "might" occur or be achieved and other similar expressions. Such forward looking statements are based on assumptions made and information currently available to us and are subject to certain risks and uncertainties that could cause the actual results to differ materially from those expressed in any forward looking statements. Readers are cautioned not to place undue relevance on these forward-looking statements. Maybank IBG expressly disclaims any obligation to update or revise any such forward looking statements to reflect new information, events or circumstances after the date of this publication or to reflect the occurrence of unanticipated events.

Maybank IBG and its officers, directors and employees, including persons involved in the preparation or issuance of this report, may, to the extent permitted by law, from time to time participate or invest in financing transactions with the issuer(s) of the securities mentioned in this report, perform services for or solicit business from such issuers, and/or have a position or holding, or other material interest, or effect transactions, in such securities or options thereon, or other investments related thereto. In addition, it may make markets in the securities mentioned in the material presented in this report. One or more directors, officers and/or employees of Maybank IBG may be a director of the issuers of the securities mentioned in this report to the extent permitted by law.

This report is prepared for the use of Maybank IBG's clients and may not be reproduced, altered in any way, transmitted to, copied or distributed to any other party in whole or in part in any form or manner without the prior express written consent of Maybank IBG and Maybank IBG and its Representatives accepts no liability whatsoever for the actions of third parties in this respect.

This report is not directed to or intended for distribution to or use by any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation. This report is for distribution only under such circumstances as may be permitted by applicable law. The securities described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. Without prejudice to the foregoing, the reader is to note that additional disclaimers, warnings or qualifications may apply based on geographical location of the person or entity receiving this report.

Malaysia

Opinions or recommendations contained herein are in the form of technical ratings and fundamental ratings. Technical ratings may differ from fundamental ratings as technical valuations apply different methodologies and are purely based on price and volume-related information extracted from Bursa Malaysia Securities Berhad in the equity analysis.

Singapore

This report has been produced as of the date hereof and the information herein may be subject to change. Maybank Research Pte. Ltd. ("MRPL") in Singapore has no obligation to update such information for any recipient. For distribution in Singapore, recipients of this report are to contact MRPL in Singapore in respect of any matters arising from, or in connection with, this report. If the recipient of this report is not an accredited investor, expert investor or institutional investor (as defined under Section 4A of the Singapore Securities and Futures Act), MRPL shall be legally liable for the contents of this report, with such liability being limited to the extent (if any) as permitted by law.

Thailand

Except as specifically permitted, no part of this presentation may be reproduced or distributed in any manner without the prior written permission of Maybank Securities (Thailand) Public Company Limited. Maybank Securities (Thailand) Public Company Limited. Maybank Securities (Thailand) Public Company Limited ("MST") accepts no liability whatsoever for the actions of third parties in this respect.

Due to different characteristics, objectives and strategies of institutional and retail investors, the research products of MST Institutional and Retail Research departments may differ in either recommendation or target price, or both. MST reserves the rights to disseminate MST Retail Research reports to institutional investors who have requested to receive it. If you are an authorised recipient, you hereby tacitly acknowledge that the research reports from MST Retail Research are first produced in Thai and there is a time lag in the release of the translated English version.

The disclosure of the survey result of the Thai Institute of Directors Association ("IOD") regarding corporate governance is made pursuant to the policy of the Office of the Securities and Exchange Commission. The survey of the IOD is based on the information of a company listed on the Stock Exchange of Thailand and the market for Alternative Investment disclosed to the public and able to be accessed by a general public investor. The result, therefore, is from the perspective of a third party. It is not an evaluation of operation and is not based on inside information. The survey result is as of the date appearing in the Corporate Governance Report of Thai Listed Companies. As a result, the survey may be changed after that date. MST does not confirm nor certify the accuracy of such survey result.

The disclosure of the Anti-Corruption Progress Indicators of a listed company on the Stock Exchange of Thailand, which is assessed by Thaipat Institute, is made in order to comply with the policy and sustainable development plan for the listed companies of the Office of the Securities and Exchange Commission. Thaipat Institute made this assessment based on the information received from the listed company, as stipulated in the form for the assessment of Anti-corruption which refers to the Annual Registration Statement (Form 56-1), Annual Report (Form 56-2), or other relevant documents or reports of such listed company. The assessment result is therefore made from the perspective of Thaipat Institute that is a third party. It is not an assessment of operation and is not based on any inside information. Since this assessment is only the assessment result as of the date appearing in the assessment result, it may be changed after that date or when there is any change to the relevant information. Nevertheless, MST does not confirm, verify, or certify the accuracy and completeness of the assessment result.

US

This third-party research report is distributed in the United States ("US") to Major US Institutional Investors (as defined in Rule 15a-6 under the Securities Exchange Act of 1934, as amended) only by Wedbush Securities Inc. ("Wedbush"), a broker-dealer registered in the US (registered under Section 15 of the Securities Exchange Act of 1934, as amended). All responsibility for the distribution of this report by Wedbush in the US shall be borne by Wedbush. This report is not directed at you if Wedbush is prohibited or restricted by any legislation or regulation in any jurisdiction from making it available to you. You should satisfy yourself before reading it that Wedbush is permitted to provide research material concerning investments to you under relevant legislation and regulations. All U.S. persons receiving and/or accessing this report and wishing to effect transactions in any security mentioned within must do so with: Wedbush Securities Inc. 1000 Wilshire Blvd, Los Angeles, California 90017, +1 (646) 604-4232 and not with the issuer of this report.

UK

This document is being distributed by Maybank Securities (London) Ltd ("MSUK") which is authorized and regulated, by the Financial Conduct Authority and is for Informational Purposes only. This document is not intended for distribution to anyone defined as a Retail Client under the Financial Services and Markets Act 2000 within the UK. Any inclusion of a third party link is for

the recipients convenience only, and that the firm does not take any responsibility for its comments or accuracy, and that access to such links is at the individuals own risk. Nothing in this report should be considered as constituting legal, accounting or tax advice, and that for accurate guidance recipients should consult with their own independent tax advisers.

DISCLOSURES

UK: Maybank Securities (London) Ltd (Reg No 2377538) is authorized and regulated by the Financial Conduct Authority.

Disclosure of Interest

Malaysia: Maybank IBG and its Representatives may from time to time have positions or be materially interested in the securities referred to herein and may further act as market maker or may have assumed an underwriting commitment or deal with such securities and may also perform or seek to perform investment banking services, advisory and other services for or relating to those companies.

Singapore: As of 6 October 2023, Maybank Research Pte. Ltd. and the covering analyst do not have any interest in any companies recommended in this research report.

Thailand: MST may have a business relationship with or may possibly be an issuer of derivative warrants on the securities /companies mentioned in the research report. Therefore, Investors should exercise their own judgment before making any investment decisions. MST, its associates, directors, connected parties and/or employees may from time to time have interests and/or underwriting commitments in the securities mentioned in this report.

Hong Kong: As of 6 October 2023, MIB Securities (Hong Kong) Limited and the authoring analyst do not have any interest in any companies recommended in this research report.

India: As of 6 October 2023, and at the end of the month immediately preceding the date of publication of the research report, MIBSI, authoring analyst or their associate / relative does not hold any financial interest or any actual or beneficial ownership in any shares or having any conflict of interest in the subject companies except as otherwise disclosed in the research report. In the past twelve months MIBSI and authoring analyst or their associate did not receive any compensation or other benefits from the subject companies or third party in connection with the research report on any account what so ever except as otherwise disclosed in the research report.

Maybank IBG may have, within the last three years, served as manager or co-manager of a public offering of securities for, or currently may make a primary market in issues of, any or all of the entities mentioned in this report or may be providing, or have provided within the previous 12 months, significant advice or investment services in relation to the investment concerned or a related investment and may receive compensation for the services provided from the companies covered in this report.

OTHERS

Analyst Certification of Independence

The views expressed in this research report accurately reflect the analyst's personal views about any and all of the subject securities or issuers; and no part of the research analyst's compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in the report.

Reminder

Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct its own analysis of the product and consult with its own professional advisers as to the risks involved in making such a purchase.

No part of this material may be copied, photocopied or duplicated in any form by any means or redistributed without the prior consent of Maybank IBG.

Definition of Ratings

Maybank IBG Research uses the following rating system

BUY Return is expected to be above 10% in the next 12 months (including dividends)

HOLD Return is expected to be between 0% to 10% in the next 12 months (including dividends)

SELL Return is expected to be below 0% in the next 12 months (including dividends)

Applicability of Ratings

The respective analyst maintains a coverage universe of stocks, the list of which may be adjusted according to needs. Investment ratings are only applicable to the stocks which form part of the coverage universe. Reports on companies which are not part of the coverage do not carry investment ratings as we do not actively follow developments in these companies.
